

Full stack software engineer

Your role

You are developing state of the art mobile apps and AI based scheduling software for our clients in the area of Field Service Management.

- ▶ Implement mobile apps for our client's Field Service Engineers
- ▶ Implement AI-based scheduling software to plan Field Service Engineers efficiently
- ▶ Cover all steps of the software development lifecycle
- ▶ Consult our clients and transform their business processes into state-of-the-art software
- ▶ Contribute to enhance and maintain our Mobile Productivity Solution (cross platform app framework (Web, Android, iOS (Hybrid)), AI-based scheduling and digital checklist software based on JavaFX
- ▶ Connect our Mobile Productivity Solution with ERP systems using Web Services (RESTful)

Your profile

- ▶ Bachelor's degree in Computer Science or equivalent training
- ▶ Strong exposure on Core Java and DevOps
- ▶ Solid design, coding, testing and debugging skills
- ▶ Experience or willing to dive in JavaFX, CI/CD, Linux/Windows CLI, XSLT
- ▶ Passionate about coding with a desire to learn the latest technologies.
- ▶ Analytical and problem-solving skills, you like to figure out how things work
- ▶ Great written and verbal communication skills - ability to explain complex situations to the team and non-technical stakeholders
- ▶ Excellent English (C1) and good German (B2) skills

Your benefits

- ▶ Flexible working time models (80-100%, Home office)
- ▶ Attractive employment conditions
- ▶ Support for further training and development as well as opportunities to take on responsibility
- ▶ Work with our industry leading clients all around the world
- ▶ Flat hierarchies and a minimum of bureaucracy
